Hi,

You can develop your own kernel mode encryption filter driver if you buy the source code license, it includes the user mode and kernel mode source code.

Here is the price list of the products:

Windows File System Filter Driver Solution --Track and Control File Access, Protect File Sharing with DRM

Hi John,

You were added to a conversation with sachin.j@datanchor.io. Here's some of what you missed.

Hello, I have obtained a trial license key for EaseFilter SDK in last week. It seems, the SDK offers the user-mode integration capabilities. However, I would like to develop my own EaseFilter based mini filter driver to acheive the transparent file-level encryption. Is there kernel-mode SDK also available? Are there any examples available? Please explain.
